

Rondcom 41

The compact form measuring station with manual, software-supported alignment of the workpiece.

- Designed for fast, easy and precise completion of form measuring tasks
- Measure polar and linear parameters, e.g. cylinders, straightness and concentricity, etc.
- High-quality axes with rotary table on air bearings, optional 500 mm Z column
- Variable measuring range and probing force
- Easy to use
- Semi-automatic processes
- CNC analysis with printout
- TIMS measuring software with assistant function for centering and leveling
- Workpieces up to 25 kg max.
- Extensive accessories permit flexible use

Accuracy through mechanical precision

Menu-guided, fast tilting and centering

For perfect cooperation with the user when preparing the measurement.
